
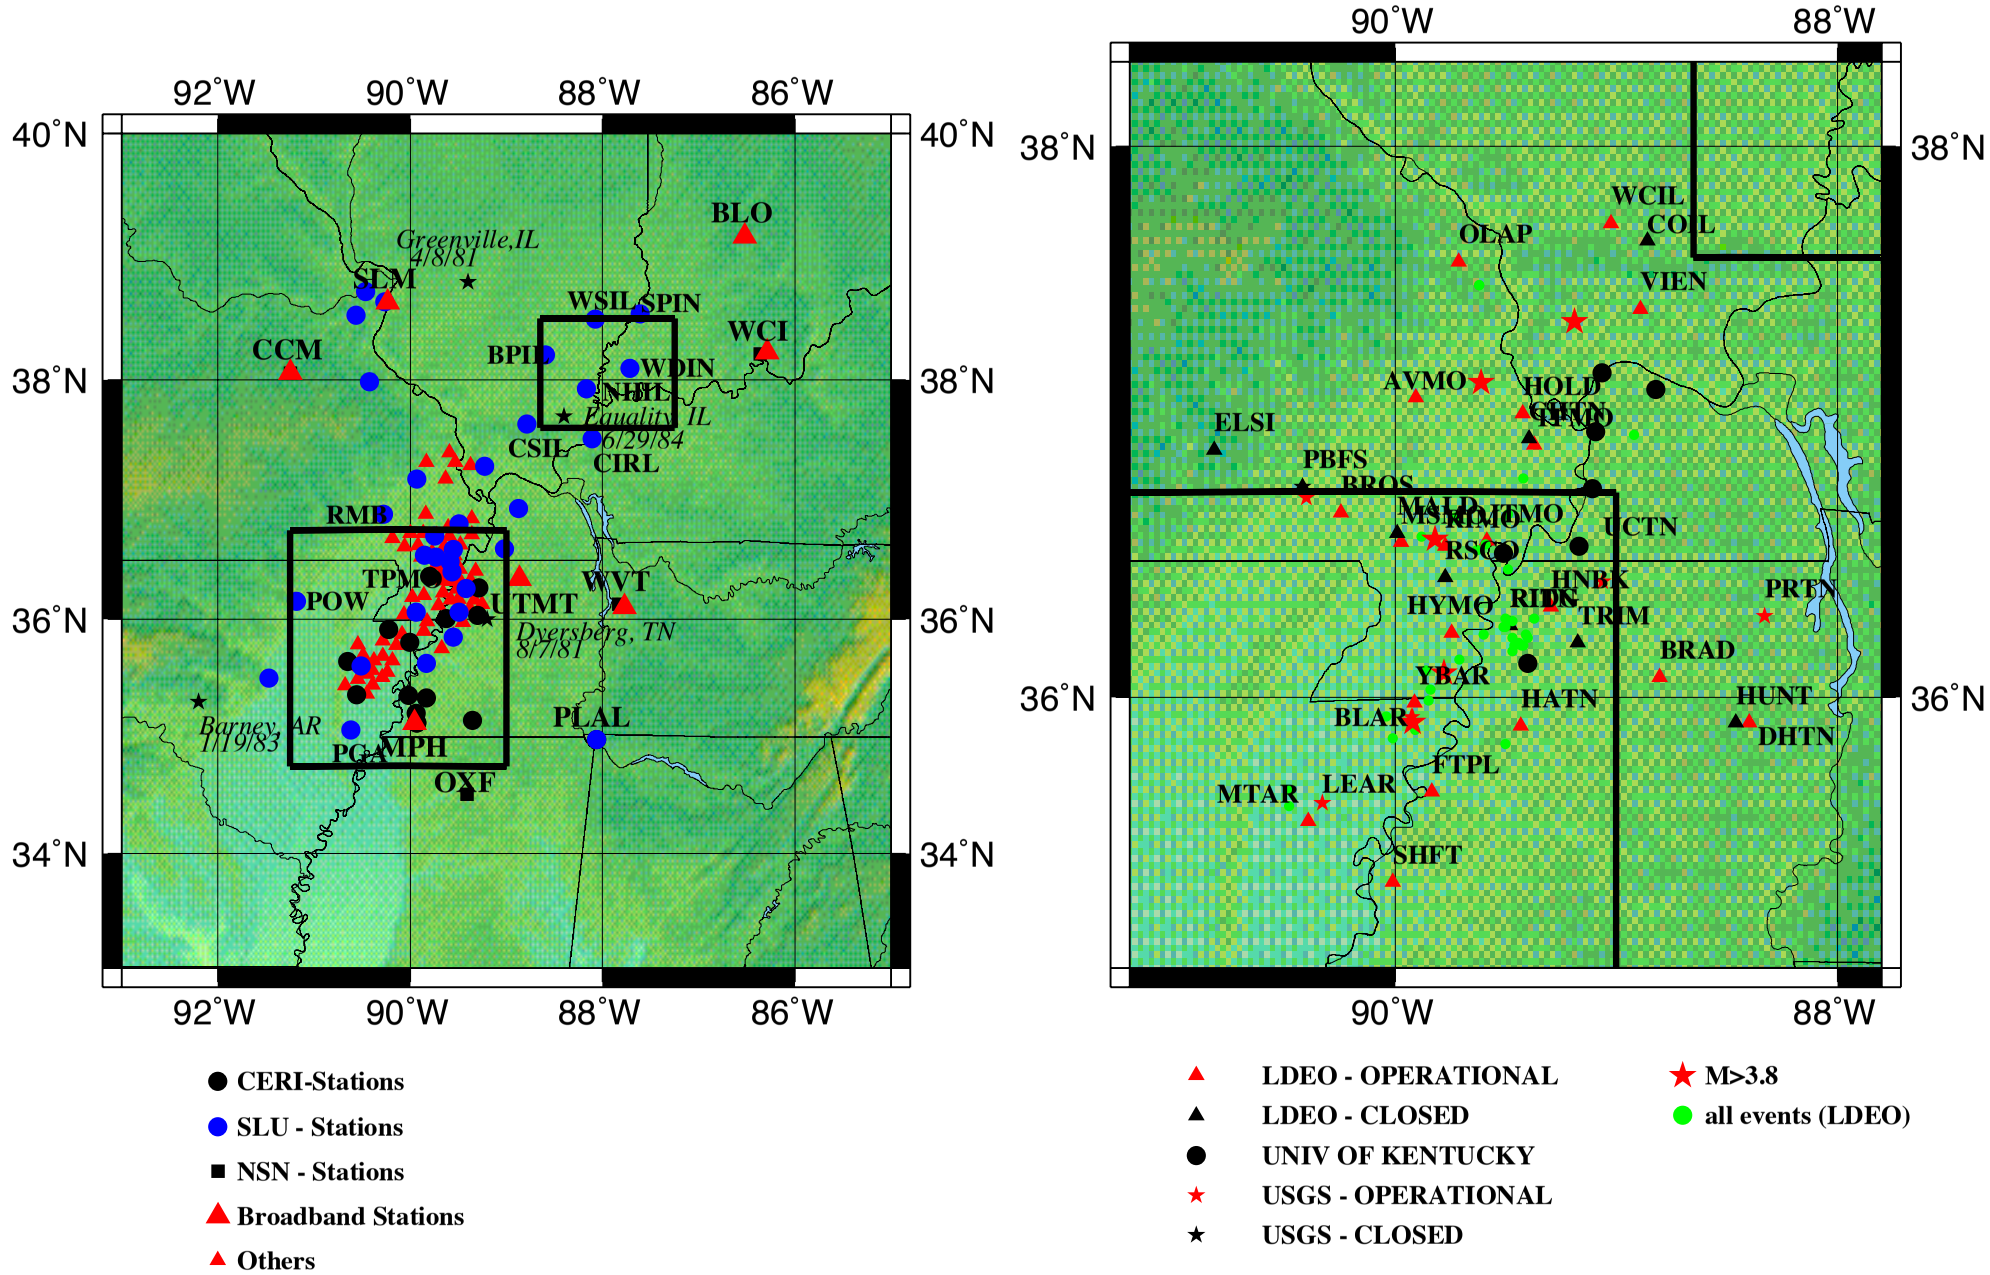

Figure 1. Maps showing locations of stations that operate(or operated) in the central United States. Left map shows the locations of stations run by SLU, CERI, NSN (broadband) network. Note the coverage of other stations shown by the small red triangles. Right map is only for the strong-motion stations. Also shown are the locations of large earthquakes (Mb>4, red large stars) and other events (green circles, for the period 1988-2000) that were recorded by the strong-motion networks.
